RESEARCH INTERESTS Systems and networking, Database

EDUCATION **M.S., University of Chicago** Sep. 2020 – Dec. 2021
Advisor: Prof. [Junchen Jiang](#)
B.S., Peking University Sep. 2016 – Jul. 2020
Advisor: Prof. [Tong Yang](#)

RESEARCH EXPERIENCE **Research Assistant** Jul. 2020 – Present
Advisor: Prof. [Junchen Jiang](#)

Measurement study over users' quality sensitivity

- Analyzed the interplay between video content and quality sensitivity in the wild using real-world measurements from 7.6M video sessions in four popular content providers

Applying influence function to machine learning algorithms

- Used the influence function to retrain machine learning algorithms

Research Assistant Jul. 2020 – Present
Advisors: Prof. [Zaoxing Liu](#) and Prof. [Junchen Jiang](#)

Applying sketching algorithms to network measurement systems

- Defined arbitrary partial key query and designed a sketch that can efficiently address the problem in both software and hardware platforms
- Designed a framework that can be applied to many sketches and enable them to work on multi-core architecture

Research Assistant May 2018 – Present
Advisor: Prof. [Tong Yang](#)

Designing approximate streaming algorithms for different applications

- Designed an adaptive communication scheme for geo-distributed systems (*e.g.*, federated learning) which need to aggregate the data of multiple local devices over wide area networks
- Defined periodicity and designed a sketch to find periodic items in data streams
- Designed a framework that can adapt many scheduling problems for a limited number of queues and work on Tofino switches
- Designed a sketch that can achieve high accuracy and high throughput for both persistence estimation and finding persistent items
- Designed a framework that can be applied to many sketches and enable them to support queries in sliding windows
